

IntelliPro
Delivering Excellence

Online services for National Electoral
Commission

Case Study

The Client

The client - National Electoral Commission of an African country wanted to develop online self help services for citizens of its country to access their voting information easily.

IntelliPro Approach

IntelliPro team is working with authorities of government to understand the entire process of education loan application in their country and developing a secure and stable system that can accessed through web thus resulting into paperless and digital loan process.

Tools/Technologies/Libraries:

- MVC.NET.
- C#.
- AngularJS 1.x.
- MS SQL Server.
- Entity Framework.

Business Scenario

Government of an African country is going digital in all aspects. As a part of this they are developing online system so that students of the country can apply and access education loan online for higher studies. Thus upbringing the digital era and helping more students to opt for higher education very easily.

IntelliPro's Solution

IntelliPro developed following different modules for the system:

- Registration & Login.
- Apply as a new voter.
- Apply for migration.
- Search polling booth.
- News & RTI from National Electoral Commission.
- Document Management System - required for managing documents for any kind of application done by a citizen (voter).
- Inbox (integrated email management) - for secure conversation between authorities and citizen (voter).
- Role and right based access to modules - for securing the sensitive data.
- Admin portal for authorities of National Electoral Commission - for approval / rejection of applications and other major functionalities.
